

Mobile shop

A Nike-inspired Android shopping app built with Kotlin and Jetpack Compose. Users can browse products, view product details, select sizes, add items to a bag, and see a running total — all without a database, using an in-memory list.

Layer	Technology
Language	Kotlin
UI Framework	Jetpack Compose (Material 3)
Image Loading	Coil (coil-compose:2.6.0)
State Management	remember + mutableStateMapOf
Navigation	Manual screen state (no NavController)
Build System	Gradle with Kotlin DSL (.kts)
Min SDK	23 (Android 6.0)
Target SDK	36

Prerequisites

Before you begin, make sure you have the following installed:

- **Android Studio** (Hedgehog or later) or **IntelliJ IDEA** with the Android plugin
- **JDK 11** or higher
- **Android SDK** with API level 36 installed
- A configured **Android Virtual Device (AVD)** — Pixel series recommended

Configuration

Sync Gradle first, then build project.

Start up virtual device, then run app.
